

## **ENVIRONMENTAL SENSITIVITIES SYMPOSIUM 2016**

The 2016 Environmental Sensitivities Symposium brings together 15 experts from around the world, all sharing their perspective on various aspects of environmental sensitivities.

Topics include electromagnetic hypersensitivity, chemical sensitivities, chronic fatigue syndrome, heavy metals (including lead), indoor air quality contaminants, mould, and chemicals (including obesogens). Every interview is informative and inspiring, and contains advice pertaining to the topic.

As well, there is a private Google+ group that you can join; a free e-magazine; and there is also a textbook available through Amazon containing 15 original papers written by each of the speakers. There will also be Q&A sessions throughout the event where you can ask your own questions.

The event is free – so please register today [www.ESSymposium.com](http://www.ESSymposium.com)
